

About Us

Based in Ireland, Randridge Technologies offers Electric Vehicle Charging solutions to clients large and small, providing extensive experience, excellent quality to all of our clients. Using our many years of experience on major electrical projects around the world, we are constantly developing newer applications in the EV charging sector, and also in the area of clean energy production and storage.

Our mission is to contribute to the environmental protection of our planet by utilising green energy. We aim to do this by harnessing the newest EV charging technology to provide commercially realistic applications for homes and businesses. Supplying everything from your standard home-charging unit to the powerful 350kW DC chargers found in petrol stations worldwide.

Our partnership with Ensto Finland & Virta Ltd allows us to provide all-inclusive EV charging packages to domestic, commercial and public sectors nationwide and a high-tech, easy to use charging app to make public charging that much simpler.

At Randridge Technologies, we take great pride in each & every EV / PHEV Charging installation we complete, large or small. We manage every project from start to finish using our extensive experience and knowledge.
